

Introduction

Heemskerk Vaste Planten - Perennials, located in Noordwijk - The Netherlands, is a family run nursery since 1965. It originated with the production of flower bulbs. The second generation of the Heemskerk family started in 1980 with the production of perennials. Starting with a very broad assortment of perennials, the company has specialised itself towards 4 main groups including; Hemerocallis, Hosta, Iris (Sibirica and Ensata) and Paeonia. With specialisation the company was able to focus and start a hybridisation program to seek for better plants with better blooming performance. In the last 35 years Heemskerk Perennials has a built-up and incredible experience with a knowledge and know-how of many varieties. Today we can help all our customer in every part of the world with a custom made program that suites their climate locally. It reduces the risks for the customer and increases the garden performance for the end user.

Tiger Blood

A trade mark with Hemerocallis

The Hemerocallis cultivars of Heemskerk are focused on a better garden performance. Our cultivars are known for:

- High bud count
- Improved form and clear, vibrant blossom colour
- Good branching, re-blooming capabilities
- Flowers that possess heavy substance, which are sun fast and open consistently under varied weather conditions
- Complete winter hardiness
- Vigorous, compact and healthy plant habit
- Exceptional bloom performance

In particular the high bud count is the most determining factor to make a choice for recommending a variety. With a high bud count we mean varieties that produces 500 flowers and more, per mature plant after leaving the plant 3 years at the same place in your garden.

A trade mark with Hosta

The Hosta is of great value for the shady garden. Heemskerk Hosta cultivars are known for:

- Vigorous, compact and healthy plant habit
- A large range of various leaf details, shapes and colours
- Varieties that are resistant to direct sun light and even slugs
- Flowers with great fragrance and some doubles
- Complete winter hardiness
- Member of Naktuinbouw Select Plant for lots of propagating material of extra quality

In particular the large range of unique varieties available is the strength of our program. Both pot producers and dry-sale companies will benefit this to ensure 100% customer satisfaction.

A trade mark with Iris

Iris Sibirica is elegant and very attractive garden plant. Our selected cultivars are very well known by the large flower size and re-blooming capacity. Heemskerck Iris cultivars are well known for:

- Large flowers
- Re-blooming capabilities
- Exceptional bloom performance
- Vibrant and wide range of flower colours
- Complete winter hardiness
- Vigorous and healthy plant habit

In particular the re-blooming is the most determining factor to make a choice for recommending a variety and with re-blooming we mean varieties that flowering more than once a year.

**“Heemskerk Perennials –
more than just quality”**

Heemskerk is for worldwide export controlled by the Naktuinbouw who promotes and monitors the quality of the product. The main focus is on propagating material, of national and international origin. Heemskerk can supply that material with a certificate, if required. For this purpose, Naktuinbouw has developed a number of quality-plus systems with Select Plant used by Heemskerk.
