Genus, Species, Cultivar Name of the plant announced for evaluation:

Anemone hupehensis Summer Breeze Picotee

Organ of the cultivar (seedling of..., sport of..., hybrid of... etc.): **seeding**

Originator / Breeder or Selector: **AB Cultivars**

Year of origin: **2021**

Introducer to the Commercial market* (company name and address): **Vitroflora Grupa Producentów.**

Year of introduction: **2023**

Does the cultivar enjoy any type of protection rights such as trademark or breeder's rights if yes which one:

Applied for

Was the variety apply to award before/when? **no**

How different/ which is the most similar existing var.: **Compact and better branching then Anemone Splendens or Precox**

Short description of the cultivar leaves, flowers:

Compact and well growing selection of fall anemone. Dark foliage forms dense upright canopy. Planety of single pink and rose flowers appears on top of the plant.

Way of propagation and the preferable method: **Root cuttings, tissue culture**

Growth and habit (erect, compact ...): **compact and upright**

Height (cm): leaves/with flowers: **45-50 cm**

Main flowering time: **August, Septmber**

How to cultivate - preferable place: soil, humidity, stand (shadow, half shadow, sunny): **Half shadow**

Special culture remarks: **Not to wet during winter**

Aster ageratoides 'Bocopola' (POLARIS)

Organ of the cultivar (seedling of..., sport of..., hybrid of... etc.): **Seedling (parentage is confidential)**

Originator / Breeder or Selector: **Boot & Co Boomkwekerijen BV, Halve Raak 7, 2771 AC Boskoop**

Year of origin: **2018**

Introducer to the Commercial market* (company name and address): **Boot & Dart Boomkwekerijen BV**

Year of introduction: **2022**

Does the cultivar enjoy any type of protection rights such as trademark or breeder's rights if yes which one: **Yes, EU Plant Breeders' Rights applied for: 2022/1791**

Was the variety apply to award before/when? **no**

How different/ which is the most similar existing var.:

POLARIS grows slightly lower, is more densely branched and has stronger branches than similar varieties.

Short description of the cultivar leaves, flowers:

Height about 60 cm, mid-green to dark green foliage, flowers white with yellow centers.

Way of propagation and the preferable method: **Cuttings**

Growth and habit (erect, compact ...): **Erect to semi-erect, forms root suckers (as do all A. ageratoides)**

Height (cm): leaves/with flowers: **About 60 cm**

Main flowering time: **Mid-August to late October; peak flowering in September.**

How to cultivate - preferable place: soil, humidity, stand (shadow, half shadow, sunny):

Grows in all common soil types, but less good in heavy clay. Normal moisture and a place in full sun of semi-shade will do.

Special culture remarks: **No**

lower colour (if possible use the RHS Colour Chart): **White, centered yellow**

Size and form of single flower: **Typical A. ageratoides flower, approx 2 cm in diameter**

Size and form of complete flowers: **Normal Aster ageratoides flowers**

Description of the leaves: **Healthy mid-green to dark green leaves. Resistant to powdery mildew.**
