

## Groundcovers

We all know the old groundcovers like *Waldsteinia*, *Pachysandra*, *Vinca* and so on.

Of course they are still very useful and helpful, but often they look rather boring ...

We have to think outside the box and start using other groundcovers that make people happy.

I'm talking about species with lots of flowers, no diseases and fast growing.

Outside the box we find following groundcovers :

*Trachystemon orientale*, the lower *Persicaria amplexicaulis*-types, *Aster ageratoides*-types,

*Epimedium 'Sulphureum'*, *Fragaria 'Mount Omei'*, *Polystichum polyblepharum*,

*Potentilla 'Nuuk'*, *Carex oshimensis*-types, *Pennisetum 'Hameln'* planted very dense,

*Geranium cantabrigiense*-types, *Geranium 'Rozanne'*, ...

Give colour to the people !!
