

Jelitto Staudensamen GmbH is specialised in production, breeding and seed technology since 1957. We supply seeds of perennials, ornamental grasses, and herbs, with a growing organic herb seed line.

In addition to our headquarters in Germany, we have offices in the USA, UK and Japan

We supply gardeners all over the world with more than 3700 species and varieties, guaranteeing the highest quality, germination power and purity.

Our pretreated JELITTO GOLD NUGGET SEED® germinates uniformly within two to four weeks of sowing, instead of after three to six months as is the norm of untreated seed.

Specially produced JET® seeds increase the germination ability and facilitate improved mechanical handling.

We publish a catalogue biannually which details our range and features countless photos and a wealth of information.

The catalogue and our shop can be found on the Internet at www.jelitto.com
